Solution

1. You can take the Edco body including the cassette off. You need an alan key size: 5 MM

2. When it is taken off you will see the black ring. This ring fits in the Edco module, but has some space between the Edco module and the ring
3. It is important when you have the mentioned sound to put some grease in this ring (in and out).

Then place it back in (you still have the cassette on)

Then place everything back.
